Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C/Comment: This enzyme is a virulence factor secreted into the periplastic space of gram C/Genetics:
A/Gene: sodC
A/Map position: 37 min
C/Function: 37 min
C/Function: artalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C/Function: Superfamily: superoxide dismutase [Cu-Zn] #status predicted 
C//CFYPOMAIN: superoxide dismutase (Cu-Zn) #status predicted
F/10-173/Product: superoxide dismutase (Cu-Zn) #status predicted
F/10-109/Disulfide bonds: #status predicted
F/10-109/Disulfide bonds: #status predicted
F/16-101/109/112/Binding site: zinc (His, His, His, Asp) #status predicted

A;Title: The complete genome of the hyperthermophilic bacterium Aquifex acolicus.
A;Reference number: A70300, MUID:98196666; PMID:9537320
A;Accession: F70321
A;Accession: F70321
A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Residues: 1-171 <AQF>
A;Cross-references: UNIPROT:066602; GB:AE000679; NID:92982936; PIDN:AAC06553.1; PID:9298

C, Comment: This protein is a membrane-bound form.
C, Function:
A, Pascription: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen in A, Pascription: catalyzes the dismutase [Cu-Zn]
C, Keywords: copper; glycoprotein; metalloprotein; oxidoreductase; zinc
C, Keywords: copper; glycoprotein; metalloprotein; status predicted
F; 20, 124, Domain: transmembrane #status predicted
F; 70, 72, 87, 144/Binding site: capper (His) #status predicted
F; 70, 72, 87, 144/Binding site: capper (His) #status predicted
F; 87, 104, 107/Binding site: zinc (His, His, His, Asp) #status predicted
F; 107/Active site: Arg #status predicted

A;Bescription: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C;Supeription: catalyzes the dismutase [Cu-Zn]
C;Supeription: catalyzes the dismutase [Cu-Zn]
C;Supeription: catalyzes the dismutase [Cu-Zn]
C;Supeription: catalyzes the dismutase [Cu-Zn]

A Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen C; Superfamily: Superoxide dismutase [Cu-Zn]
C; Superfamily: Superoxide dismutase [Cu-Zn]
C; Superfamily: Superoxide dismutase [Cu-Zn]
C; Styeywords: copper; metalloprotein; oxidoreductase; zinc
F; 46, 48, 63, 119/Binding site: copper (His) #status predicted
F; 57-145/Disulfide bonds: #status predicted
F; 53, 71, 80, 83/Binding site: zinc (His, His, His, Asp) #status predicted
F; 142/Active site: Arg #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R,Scioli, J.R.; Zilinskas, B.A.

A;Title: Cloning and characterization of a cDNA encoding the chloroplastic copper/zinc-sA;Reference number: A30204; MUID:89017257; PMID:2845417
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PIDN:AAA33688.1; PID:g169160 as Ala and CAG for residue 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen of 5. Superfamily: Superoxide dismutase [Cu-Zn]

G. Superfamily: Superoxide dismutase [Cu-Zn]

G. Superfamily: Superoxide dismutase [Cu-Zn]

F. 1-48/Domain: transit peptide (chloroplast) #status predicted <TNP>
F. 19-202/Product: superoxide dismutase (Cu-Zn) #status predicted <AMT>
F. 194.96.111.166/Binding site: copper (His) #status predicted
F. 105.194/Dismitide bonds: #status predicted
F. 111,119,128,131/Binding site: zinc (His, His, Asp) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                     9

A; Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen of c; Superfamily: superoxide dismutase [Cu-Zn] C; Superfamily: superoxide dismutase [Cu-Zn] C; Keywords: copper; heterodimer; homodimer; metalloprotein; oxidoreductase; zinc F; 44, 46, 61, 117/Binding site: copper (His) #status predicted F; 55-44, 50. 18, 181/Binding site: zinc (His, His, His, Asp) #status predicted F; 61, 69, 78, 81/Binding site: zinc (His, His, His, Asp) #status predicted F; 140/Active site: Arg #status predicted
                                                                                                                                                            A;Accession: A36699
A;Molecule type: protein
A;Residues: 1-30 °CAP>
A;Note: AA homodimers, BB homodimers, and AB heterodimers were observed; the material sector A;Note: 18-His, 24-Glu, 26-Ala, and 28-Ser (Cu-Zn superoxide dismutase B) were also found

Isolated or recombinant polypeptide for treating porcine and avian species against Lawsonia intracellularis infection, comprises, mimics or cross-reacts with the B or T cell epitope of Lawsonia SodC polypeptide.

Claim 6; Page 79-80; 85pp; English.

This sequence represents an immunogenic polypeptide, SodC, which is capable of eliciting the production of antibodies against L. intracellularis when administered to an avian or porcine animal. This polypeptide can be used in a vaccine composition for the prophylaxis or treatment of intestinal infection of an animal by Lawsonia. The DNA

```
encoding SodC polypeptide may be used in a vaccine vector such that the SodC polypeptide is expressible at a level sufficient to confer immunity against Lawsonia. The polypeptide is useful for diagnosing infection of a porcine or ariam animal or identifying whether or not the animal has suffered from a past infection or is currently infected with L. intracellularis or a microorganism that is immunologically cross-reactive to it. This is done by contacting whole serum, blood lymph nodes, ileum, caecum, small intestine, large intestine, faeces or rectal swab derived from the animal with the immunogenic polypeptide or an antibody raised is mit and with the immunogenic polypeptide or an antibody raised L. intracellularis or related microorganisms by hybridization. The SodC polypeptide is useful in the preparation of a medicament for the treatment and prophylaxis of porcine proliferative enteropathy (PPE)
                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel enterchaemorragic Escherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterchaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   26

The sequence is that of the 20kD Brucella abortus copper-zinc superoxide dismutase (CuZnSOD) which is used as part of a method for detecting B. abortus infection in animals, in particular Bovine brucellosis. The method can distinguish between animals which have a natural infection and those which have been vaccinated. CuZnSOD or a segment effective as an antigenic determinant is combined with a body fluid sample and the presence of a complex of the CuZnSOD and antibody detected. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-WAR-2003 to correct PI field.) (Updated on 24-OCT-2003 to standardise OS field)

Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae of the invention

                                                                                                                                                                                                                                                                                                                                                    The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polymetides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis apolypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diagnosis or antibacterial diseases, as components of antibacterial vaccines, as targets sequence represents a Proteus mirabilis polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABR72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RLVVKADGIAKETLLAPRLTVK---EIKGRTVMIH----AGGDNYSDKPLPLGGGGARI

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB77071). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       --IDDNGIKQSIGTVTFTDTDKG--LQIK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5 LVVSLALCATICSAAQTRNMPIQALAYLIGPVQSDNTQVK---GNVTFTQNDCGQNVHVR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebbla), cancer and immune system disorders. The present sequence was used to illustrate the invention

The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     96 KVRITGLAPGLHGFHLHEFGD-----TTNGCMSTGPFFNPN--GLTHGAPGDEVRH 144

The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            105 IGKHEGPLGN-GHKGDLPRLVVKADGIAKETLLAPRLTVK---EIKGRTVMIHAGGDNYS 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or EDOla), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  145

                            The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Bobla), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                          70

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up convarientation in transgenic plants overexpressing the heterodimeric E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therappeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or phomass, altered endoreduplication, biochemistry, signal corp plants architecture or physiology, altered endoreduplication, biochemistry, signal cransforded in a positive or negative selectable markers devined transformation of cells or tissues. The identified genes play a crole in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale cress protein

                                                                                                                                                                                                                     of Protein C inhibitor (PCI), namely the A+ amphipathic alpha helix of Fulf, and human superoxide dismutase, joined via a linker region. The fusion protein is useful for extending the in vivo lifetimes of biologically active opds. Such as SOD and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of autoimmune diseases e.g. rheumatoid and osceo-arthritis. See also (Updated on 25-MAR-2003 to correct PN field.)

The fusion protein comprising the a glycosaminoglycan binding region and human superoxide dismutase, joined via a linker region was constucted according to the formula M-(Z-M)-SOD where Z is the peptide -EXTLRKWILK-. The fusion protein is useful for extending the in vivo lifetimes of biologically active cpds. such as SOD and for targetting them to specific eell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PAEHDGHLTAGLQAHG-HYDPDKTGKHEGPLG-NGHKGDLPRLVVKADGIAKETLLAPRL 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          65 -----NTAGCTSAGPHFNP-LSRKHGGPKDBERHVGDLGNVTADKDGVADVSIEDSVI 116
                                                                                                                                                                                             Fusion proteins with glycosamino:glycan-binding and superoxidedismutase activities - reduce tissue damage caused by super:oxide radicals, useful in treating autoimmune diseases e.g. rheumatoid arthritis and osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             64

The fusion protein comprising the a glycosaminoglycan binding region and human supercxide dismutase, joined via a linker region was constructed according to the formula M.(Z-M)2-SOD where Z is the peptide -EKTIRKWLK-. The fusion protein is useful for extending the in vivo lifetimes of biologically active cpds. such as SOD and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of autoimmune diseases e.g. rheumatoid and osteo-arthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                The fusion protein comprising the a glycosaminoglycan binding region and human superoxide dismutase, joined via a linker region was constucted according to the formula M.(Z-M-SOD where Z is the peptide -YKKIIKKLES-. The fusion protein is useful for extending the in vivo lifetimes of biologically active cpds. such as SOD and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of autoimmune diseases e.g. rheumatoid and osteo-arthritis. ```
The fusion protein comprising the a glycosaminoglycan binding region and human superoxide dismutase, joined via a linker region was constructed according to the formula M-(Z-M)-SOD where Z is the peptide -EKTLEKWLK.

The fusion protein is useful for extending the in vivo lifetimes of biologically active cpds. such as SOD and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of autoimmune diseases e.g. rheumatoind and osteo-arthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The fusion protein comprising the a glycosaminoglycan binding region and human superoxide dismutase, joined via a linker region was constructed according to the formula M.(Z-M)2-80D where Z is the peptide -YKKIKKILES . The fusion protein is useful for extending the in vivo lifetimes of biologically active cpds. such as 80D and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with 80D to increase stability, plasma half-life and ease of purification of 80D. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of autoimmune diseases e.g. rheumatoid and osteo-arthritis.
